Project Report: Trellomize

Team: J1
Members: Mohammad Amin Shamsi - Amirreza Havoshki
Amirreza Havoshki's Tasks: unittest - part of manager - part of user
Other tasks are assigned to Mohammad Amin Shamsi.
The sections have been well-designed, and due to the independence and data storage approach, expansion is easily feasible.
From the backend perspective, there won't be any significant issues unless the number of projects becomes large, leading to time-consuming data analysis in real-world scales. However, the frontend requires a GUI.
Overall, the project didn't involve any specific algorithms besides how to save datas and resolve conflicts.
